

## CloudRanger Client Testimonials

### SVC Awards 2017 Nomination

“CloudRanger has become vital to our tactical roadmap. DevOps has been able to better manage costs by shutting down servers on schedule, and automatic snapshotting has systematically given the whole team the ability to get a better night's sleep. For that, we're eternally thankful!”

- Adrian Grayson, Project Manager, VOKKE

“CloudRanger saves me a ton of time and I always know that the tasks are running how I want. We use their scheduler for non-production EC2s, and that is a huge money-saver. I implemented a strict backup retention policy, and the software creates backups every day, and then I set it up to delete them after seven days, so we aren't storing old data forever. It's so great!”

- Chris Burnett, IT Director, George Street Photo & Video

“CloudRanger has enabled us to easily create schedules for our new AWS demo environments saving time and money for the business. The automated backups and archiving have been very useful as well.”

- Steve Roberts, Head of IT, BooHoo.com

“It helps to solve a pain point in the Amazon Web Services architecture by allowing for the ability to automate the creation of server snapshots. This process has been quite time-consuming in the past. It is lightweight, cost effective and dynamic, and as the owner of an established tech SMB, this is exactly what we need.”

- Mike Staines, CTO, HUB

“Awesome scheduling software, with tons of options and flexibility. Also great customer support!! Did I mention, fair pricing? Kudos to the team and looking forward to the future enhancements! Loved your receptivity and customer engagement!”

- Cosmin Ioan, Business Intelligence Architect, Qualmetrix
